## **Supplementary Material**

## Prevalence and Possible Factors of Myopia in Norwegian Adolescents

Lene A. Hagen, Jon V. B. Gjelle, Solveig Arnegard, Hilde R. Pedersen, Stuart J. Gilson, Rigmor C. Baraas

## (i) Community Profile and Demographics

The participants in this study reported to live in detached houses (77.7%; 95% CI: 73.5–81.5%), semi-detached or terraced houses (12.8%; 95% CI: 9.8–16.2), or apartments (7.1%; 95% CI: 4.8–9.8%; 2.5% non-responders). The median distance from where they lived to school was 8.0 km (range: 0.0-75.0 km), and the median time to get to school was 20.0 minutes (range: 1.0-100.0 min) (0.7% non-responders). The participants went to school by bus/train (63.1%), car (37.2%), foot (24.3%), or bike (14.0%) (could be a combination of more than one, for example bus and foot; 0.7% non-responders).
